

Oklahoma Lesser Prairie-Chicken Spatial Planning Tool

Where Wind Energy Could Go and Have Reduced or No Effect on Lesser Prairie-Chicken Conservation

This map uses a criteria of wind class 3 or greater from the Oklahoma Wind Power Initiative's wind potential neural network model, lesser prairie-chicken (LEPC) model rank 3 or less, and a contiguous area of 5,000 acres or more to show representative areas that are of the highest wind energy importance, lowest LEPC model importance and are of sufficient contiguous acreage to be a feasible commercial wind energy development.

LEPC Model Version 2.0, March 1, 2010. Valid through April 30, 2011; Update available March 1, 2011.
