Summary of tournament reports by lake for 2023 & 2024.....	11

## INTRODUCTION

The Oklahoma Department of Wildlife Conservation (ODWC) historically gathered standardized statewide data on competitive bass fishing through a voluntary reporting system. While the results were valuable to biologists and anglers alike, participation in the program declined in the early 2010s leading to its discontinuation in 2014. With a new statewide black bass regulation going into effect in September of 2022 (1 Largemouth/Smallmouth greater than 16 inches per day), a new Tournament Exemption and Reporting Program was launched. Additional information about this program can be found at [www.wildlifedepartment.com/blackbass](http://www.wildlifedepartment.com/blackbass). Only tournaments seeking an exemption from the daily length limit are required to obtain an Exemption Permit. Therefore, some tournament organizations utilizing catch, weigh, and immediate release formats, or those abiding by the daily length limit may not be represented in these results.

Tournament results can be very valuable data to assist ODWC biologists with the management of Oklahoma bass populations. We cannot conduct electrofishing surveys every year on every lake; therefore, tournament results allow our biologists to monitor bass populations between surveys.

It is the most consistent way we can track what anglers are catching. We also know that these data can be valuable to both tournament and non-tournament anglers.

We want to thank the numerous Tournament Directors who applied for Tournament Exemption Permits and completed Bass Tournament Reports. In 2023 and 2024, we received 3,079 reports from 296 tournament directors. Without your cooperation, this program could not be a success. Thank you all for your time and effort!

## SUMMARY OF 2023 and 2024 RESULTS

**In 2023, there were a total of 1,672 Bass Tournament Exemption Permits and 1,566 Bass Tournament Reports (93.7% reporting rate). Numbers were very similar in 2024 with 1,629 Permits and 1,513 Reports (92.9% reporting rate).**

- Number of Lakes – Reports were received for a total of 86 different lakes in 2023 and 72 lakes in 2024. In both years, a total of 26 lakes received more than 20 tournament reports. Tenkiller had the most permits in 2023 (153), while Grand Lake took the top spot in 2024 (163).
- Angler Hours – This report summarizes nearly 475,000 hours of fishing in 2023 and 425,000 hours in 2024. Grand Lake tops this category both years with over 120,000 hours of reported tournament fishing time annually.
- Permit Type – This was nearly identical between years with 1-Day Permits = 89%, 2-Day Permits = 10%, 3-Day Permits = 1%, and 4-Day Permits = <1%.
- Total Bass – Approximately 85,000 bass were weighed each year during bass tournaments in 2023 and 2024. The average bass weighed 2.3 pounds across both years.
- Statewide Average - The average tournament in 2023 and 2024 consisted of approximately 19 boats, fishing for 6 hours, weighing a total of 54 bass, with a winning 1<sup>st</sup> place weight of 13 pounds. Statewide metrics between years remained surprisingly consistent even though results for individual lakes often fluctuated.
- Big Bass – In 2023, a total of 35 bass over 8 pounds were reported in tournaments from 13 different lakes. Broken Bow had the most trophy bass (9), while Wilburton City Lake had the biggest bass at 11.8 pounds! 2024 had 38 bass over 8 pounds, with Murray producing the most (4) and Broken Bow having the largest at 12.91! Hours of fishing to catch a 5-pound bass in a tournament was 290 hours in 2023 and 320 hours in 2024.

Table 1: 2023 Top-20 Oklahoma bass lakes based on five fishing quality indicators. Only lakes with a minimum of 20 reports were considered for the Top-20 list to reduce the chance a few extremes would skew the rankings. Rankings are based on Average 1st place winning weight, Average weight per fish, Average number of bass per angler, Percent of anglers successfully weighing any fish, Hours needed to catch a bass > 5 lbs. Each category is ranked in order with the top lake receiving 20 points and the bottom lake receiving 1 point. Average 1<sup>st</sup> place winning weight was used to break ties.

## DO YOUR PART – PROTECT OKLAHOMA WATERS

Oklahoma law prohibits the possession or transport of invasive species. Boaters must remove all aquatic plants, zebra mussels, and other invasive organisms from boats, trailers, and other equipment prior to launching boats in state waters.

### COMMONLY FOUND AQUATIC INVASIVE SPECIES

eurasian watermilfoil

hydrilla

Eurasian watermilfoil & hydrilla are two of the invasive aquatic plants found in numerous lakes throughout Oklahoma. They are most often spread to new waters through fragments carried by boats, motors, trailers, and live wells. Once established, these plants form dense mats that reduce water flow, hinder boat navigation, reduce critical fish spawning and feeding habitat, and create stagnant areas with warmer water and lower oxygen levels.

Zebra mussels filter out phytoplankton, zooplankton, and organic material that are essential for native fish and mussel species. They also alter water chemistry and clog both water intake pipes and boat motors. Easily spread by boats and other gear, zebra mussels can survive out of water for more than a week. A single female can release up to one million eggs each season, so transporting just one zebra mussel can spell trouble for our water, native species, and your boat.

zebra mussel

white perch

grass carp

bighead carp

silver carp

White perch, grass carp, silver carp, and bighead carp are invasive fish that threaten Oklahoma's aquatic ecosystems. These species are most commonly spread through connected waterways and the movement of live bait. Once established, they disrupt food webs, degrade habitat, and negatively impact fishing and recreation across the state.

### CLEAN.

Remove all plants, animals, and mud from your boat, trailer, and gear. This can be done thoroughly by pressure washing or using a diluted bleach solution.

### DRAIN.

Drain all water from your boat, motor, bilge, live wells, coolers, and ballast.

### DRY.

Allow your boat, trailer, and equipment to completely dry before visiting a new body of water.

### REPORT INVASIVE SPECIES

For more information on aquatic invasive species in Oklahoma or to report a sighting, please visit the ODWC website.
